PERFORMANCE STANDARDS

[This Appendix will prescribe project-specific minimum Performance Standards. The Performance Standards prescribed in this Appendix will assess productivity of the terminal/berth etc. as also the manner in which the assessment of compliance/shortfall in compliance will be made. The Performance Standards given below are indicative. Ports will have to develop Performance Standards for each specific project. These Performance Standards can be drawn from the specific design parameters as prescribed in the feasibility report and circulated to the selected bidders as well as the operational requirements and will be firmed up at the RFP stage for each project. Further, the dynamics in handling of export and import cargoes being different, distinction in the Performance Standards between import and export cargoes should be made. The guidelines for formulating the Performance Standards along with the indicative standards and norms are given below which may be customized as per the requirements of the Project. Weightages in case of shortfall in meeting the prescribed minimum standards in respect of each of the performance standards shall be assigned by the Concessioneing Authority keeping in view the project-specific operational requirements.]

Performance Standards

1. Gross Berth Output

The parameter deals with the productivity of the terminal (Gross Berth Output) for different types of cargo. In case of dry and break-bulk cargo, the capability of the terminal (mechanization, method of handling) and parcel size will determine the Gross Berth Output. Higher terminal capability and greater parcel size will lead to high productivity.

The Gross Berth Output shall be calculated as the total cargo handled (either loaded/unloaded) from the ship during a month divided by the time spent by the ship at

the terminal number of working days of ships in that month at that terminal. While determining the number of working days from the ship hours, the berth allowance of [●] hours shall be subtracted from the total hours.

In the case of containers the crane rate shall be measured by dividing total number of TEUs lifted on/off from ships by the elapsed crane time. The elapsed crane time is the total allocated crane hours less operational and non-operational delays.

The indicative norms for Gross Berth Output for different categories of cargo are as follows:

Cargo Category	Indicative Norms
Container	
(Main line vessel)	[25 moves per hour]
(Feeder vessel)	[17 moves per hour]
Iron Ore - Import / Export (Mechanized)	
For terminals capable of handling more than 100,000MT parcel size	[60,000T/day]
For terminals capable of handling less than 100,000MT parcel size.	
a) 65,000-100,000	[30,000T/day]
b) 30,000- 65,000	[20,000T/day]
c)< 30,000	[10,000T/day]
Coking Coal - Import (Mechanized)	
For terminals capable of handling more than 100,000 MT parcel size	[50,000T/day]
For terminals capable of handling between 65,000 MT-100,000MT parcel size.	[40,000T/day]
For terminals capable of handling between 30,000MT-65,000MT parcel size.	[30,000T/day]

For terminals capable of handling less than 30,000MT parcel size	[15,000T/day]
Thermal coal – Import / Export (Mechanized)	
For terminals capable of handling more than 100,000 MT parcel size.	[50,000T/day]
For terminals capable of handling more than 65,000 MT parcel size.	[45,000 T/day]
For terminals capable of handling between 30,000-65,000 MT parcel size	[30,000T/day]
For terminals capable of handling less than 30,000MT parcel size.	[10,000T/day]
Non-coking coal - Import (Mechanized)	
For terminals capable of handling more than 100,000 MT parcel size	[40,000T/day]
For terminals capable of handling more than 65,000 MT parcel size.	[30,000T/day]

(a) Containers:

The Transit Storage Dwell Time for a container shall mean the total time for which the container remains in the terminal. The Transit Storage Dwell Time for containers shall be calculated as an average and shall be the sum of the transit storage of each container handled during the month at that terminal divided by the number of containers. To further clarify, the date and time a container is discharged from the vessel till the said container leaves the out - gate of the Terminal, is the total transit storage time for import box. In case of export the time and date from which the container enters the terminal till the time and date it is loaded on to a vessel will be the storage time. The details of time of discharge, gate-in, gate-out and loading need to be maintained in respect of each container including ICD containers.

Unclaimed cargo or any cargo that has been detained by the customs or any Government Authority may be excluded.

(b) Bulk Cargo:

The Transit Storage Dwell Time for coal/coke/mixed dry bulk cargo/liquid cargo shall be calculated, as half of average parcel size of above cargo vessels in a month divided by average disposal of cargo from the port per day as per the following methodology:

$$\text{Average disposal of Cargo per day (A)} = \frac{\text{OB+Received/Despatched-CB}}{\text{No. of days}}$$

OB = Opening Balance, CB = Closing Balance.

$$\text{Average Parcel Sizes (B)} = \frac{\text{P1+P2++Pn}}{\text{n(no. of parcels)}}$$

P1,P2Pn are parcel size of each vessel in a month.

$$\text{Transit Storage Time for Bulk Cargo} = 0.5 (B/A)$$

(c) Break-bulk cargo:

The Transit Storage Dwell Time of Break Bulk cargo shall be calculated in the same manner as calculated for container in the terminal. The Transit Storage Dwell Time for Break Bulk Cargo is the sum of time of each unit of cargo that remains in the Port in a month divided by the number of cargo units handled during that month in the terminal. To further clarify, the time the break bulk cargo remains in the port will commence from the date and time of landing till the date and time of exit from the Port in case of import and for export from the date and time the cargo entered the Port area till the date and time of the shipment.

Performance Evaluation and calculation of liquidated damages:

Performance evaluation shall be made on a quarterly review of the reports furnished by the Concessionaire and/or the records of the Concessionaire and/or by an enquiry by the Concessioning Authority. The Concessionaire shall be liable to pay liquidated damages determined at the rate of [1% (one per cent) of the Gross Revenue of the respective

quarter for every shortfall of 10% (ten per cent)] in the average performance which shall be assessed in the following manner.

Each Performance Standard is calculated as an average in the manner indicated above. The actual average performance vis-à-vis a standard will be evaluated against the prescribed standard. The shortfall will be computed as a percentage of the prescribed standard. The shortfall in respect of each performance standard will have a weightage assigned to it. The overall shortfall in average performance shall be assessed as the aggregate of the weighted shortfalls in respect of each of the performance standards. For example, if there is a shortfall in Gross Berth Output by $x\%$, Transit Storage Dwell Time by $y\%$ and Turn round time for receipt/delivery operations by $z\%$ and the weightage assigned to such shortfalls is 0.7, 0.2 and 0.1 respectively, then the overall shortfall in average performance will be $(0.7x + 0.2y + 0.1z)\%$.
